encompasses more than just the act of teaching science. It has provided me with a profound insight into the realm of inquiry-based learning, exploring its diverse forms and levels, while shedding light on the distinctive roles that both students and educators assume in the learning process.

Moreover, through this course, I have learned why and how to teach young learners about STREAM.

thank you for your support
Initially, I was uncertain about the purpose of taking this course, especially after taking ECE3213 (Fundamentals of Mathematics and Science in Early Childhood). However, as the course progressed, I realized that it delves deeper into the concept of teaching science, focusing not only on its application but also on who is responsible for it. Previously, we learned about the 5E's approach, which taught us how to teach science. Now, in this course, I have gained a better understanding of inquiry-based learning and its different types and levels, as well as the roles of both students and teachers in the learning process. I also appreciate how the TP tasks are connected to our second assessment. STEM event was one of the best experiences of learning I have. So far, I find this course both interesting and informative. Thank you, Dr. Marwa, for creating such a well-developed course.

I was excited about this course because I love science very much, but at the beginning of the course I felt that it was a little difficult because I was taking science in Arabic and now in English, so it was a little difficult to adapt to this thing, but in the end, because the organization of the course and the innovative teaching methodology I experienced with DR. Marwa, I felt that there was no great difficulty and I think that it is a very important course. She made the science an enjoyable course and not difficult nay more understand that it encompasses more than just the act of teaching science. It has provided me with a profound insight into the realm of inquiry-based learning, exploring its diverse forms and levels, while shedding light on the distinctive roles that both students and educators assume in the learning process. The course is clear, organized and well-developed for us.

Moreover, through this course, I have learned why and how to teach young learners about STREAM.

I wish to express my gratitude to Dr. Marwa for her dedication in crafting such a meticulously structured and highly informative course.

I want to express my heartfelt gratitude for your outstanding guidance this semester. Your commitment to education and passion for the subject made this term truly enriching.

Your unparalleled knowledge and clear explanations made learning engaging and accessible. The challenging assignments pushed me to think critically, contributing to my personal and academic growth.

Your mentorship has been invaluable, shaping my educational experience. I am confident the skills I gained will serve me well in the future.
